

Transform Fresno Project 20

Fresno EOC Partnership for Energy Savings and Green House Gas (GHG)
Reductions In Southwest Fresno – Vehicle Replacement Program

Fresno
**Economic
Opportunities
Commission**

Local Conservation Corps

Program Overview

Fresno EOC's leveraged project works with Valley CAN (Clean Air Now) to replace 50 older vehicles with higher emissions with newer more efficient vehicles that produce fewer carbon emissions.

The program provides education to the community on how to receive vouchers to trade in 1999 or older vehicles to purchase newer hybrid or plug-in electric vehicles.

This program is designed to remove older vehicles that are less efficient and increase green house gas emissions that impact air quality in the San Joaquin Valley.

Results Achieved

- Community Outreach events held to promote program
- Assistance provided to residents to complete applications to replace vehicles
- Fifteen Vehicles have been replaced with new more energy efficient newer vehicles
- Total vouchers in the amount of \$119,500 have been issued to assist applicants with the purchase of newer vehicles.

Program Update

Due to the pandemic field operations are suspended until county-wide restrictions have been lifted.
